Electrocardiography (ECG)  
Sensor Datasheet  

**SPECIFICATIONS**  
- Gain: 1019  
- Range: ±1.47mV (with VCC=3V)  
- Bandwidth: 25-100Hz  
- Input Impedance: >100GOhm  
- CMRR: 100dB  
- Cable Length: 100±0.5cm (customizable)  
- Connector Type: UC-E6 (Male)

**FEATURES**  
- Bipolar differential measurement  
- Pre-conditioned analog output  
- High signal-to-noise ratio  
- Medical-grade raw data output  
- Ready-to-use & miniaturized form-factor

**APPLICATIONS**  
- Life sciences studies  
- Heart rate & heart rate variability  
- Human-Computer Interaction  
- Biometrics  
- Affective computing  
- Physiology studies  
- Psychophysiology  
- Biofeedback  
- Biomedical devices prototyping

**GENERAL DESCRIPTION**  
Our low-noise ECG local differential triode configuration enables fast application and unobtrusive single-lead ECG data acquisition (although custom electrode cable configurations are available). The state-of-the-art design of the analog frontend on this sensor is specifically targeted at analyzing minutiae in the data and provides medical-grade raw sensor data.

This sensor can be used to extract heart rate data and other ECG features, enabling its application in research fields such as biomedical, biofeedback, psychophysiology, and sports, among many others.

![Fig. 1. Standard biosignalsplux ECG sensor with short electrode cables (4cm + 6cm + 4cm).](image1)

![Fig. 2. Typical raw ECG data (acquired with biosignals).](image2)

![Fig. 3. Example sensor placement using an ECG triod (equivalent to a standard medical-grade V6 lead).](image3)

Sensor Datasheet

TRANSFER FUNCTION

\[-1.47 \text{mV}, +1.47 \text{mV}\]

\[
ECG(V) = \left(\frac{\text{ADC} - \frac{1}{2}}{2^n} \right) \times VCC
\]

\[
ECG(mV) = ECG(V) \times 1000
\]

\[VCC = 3V\] (operating voltage)
\[G_{ECG} = 1019\] (sensor gain)

\[ECG(V)\] – ECG value in Volt (V)
\[ECG(mV)\] – ECG value in millivolt (mV)
\[ADC\] – Value sampled from the channel
\[n\] – Number of bits of the channel

PHYSICAL CHARACTERISTICS

> \[W1 \times L1 \times H1:\] \quad 1.5 \times 2.1 \times 0.4cm
> \[W2 \times L2 \times H2:\] \quad 1.4 \times 1.7 \times 0.5cm
> \[A1:\] \quad 105 \pm 0.5cm
> \[A2:\] \quad 4 \pm 0.5cm
> \[A3:\] \quad 6 \pm 0.5cm
> \[D:\] \quad 0.4cm
> \[Weight:\] \quad 9g

> \[Available Sleeve Colors:\] White, Black, Blue, Green, Red, Yellow, Gray, and Brown

Note: This sensor is also available with the electrodes cables (A2 & A3) in 30cm lengths.

---

1 The number of bits for each channel depends on the resolution of the Analog-to-Digital Converter (ADC); in biosignalsplux the default is 16-bit resolution (\(n = 16\)), although 12-bit (\(n = 12\)) and 8-bit (\(n = 8\)) may also be found on older devices.
